

## UNWINDER & REWINDER FOR EPSON TM-C3500 PRINTER

LABEL REWINDER

Epson TM-C3500 printer  
 (Not included)

LABEL UNWINDER

The new Unwinding/Rewinding system for Epson TM-C3500 Label Printer can handle media up to 127mm wide and unwind/rewind label rolls having outside diameter up to 250mm. Units adjustable core holder (40-118mm).

To guarantee an aligned media path in the system, the printer plate is available to connect the rewriter and unwinder together. It also offers a customized sliding support where lean and fix the Epson printer.

An external power supply 100/240VAC - 2.5A  $\overline{\sim}$  at 24V allows an electronic circuit to provide, through the tension arm, the adjustment of the rotation speed and rotation direction. A 2A fuse is used as protection.

The unwinder and rewriter for Epson TM-C3500 printers have two types of speed adjustments: it is possible to set the main speed through a knob and the tension arm automatically adjusts the speed from zero, up to the desired speed. When the roll runs out, each device stops beeping.

### LABEL UNWINDER

The position of the tension arm is calibrated as follows:

- When the printer forwards the media for printing, the tension arm goes up, the device unwinds the media.
- When the tension arm is in the middle position, the device is idle.
- When the printer pulls back the media, the tension arm goes down, the device rewinds it.

### LABEL REWINDER

The position of the tension arm is calibrated as follows:

- When the printer forwards the media for printing, the tension arm goes down, the device rewinds the media.
- When the tension arm is in the middle position, the device is idle.
- When the printer pulls back the media, the tension arm goes up, the device unwinds it.
